About NLnet Labs

NLnet Labs is a research and development group that focuses on those developments in Internet technology where bridges between theory and practical deployment need to be built; areas where engineering and standardization takes place. It is our goal to play an active and relevant role in these areas through the development of open-source software, through participating in development of open standards, and through the dissemination of knowledge.

Student projects

NLnet Labs encourages (graduate) students to perform their projects at NLnet Labs. Preferably such project should apply to the Internet and result in open-source software, but alternatives are welcome.

Students that perform such projects are expected to work at NLnet Labs' office in Amsterdam for a few days per week.

If you have a project it is possible for NLnet Labs to shepherd it, please contact us at openings@nlnetlabs.nl, so that we can work out the details together.

Previous projects include Border Gateway Protocol Modeling and Simulation (1) and Formalization and Verification of the Shim6 Protocol (2).
