Enhanced ELAN functionality for sign language corpora

Onno Crasborn
Radboud University Nijmegen

Han Sloetjes
Max Planck Institute for Psycholinguistics

This poster presents new functions added between versions 2.6 and 3.4 of ELAN in the context of the Corpus NGT project between 2006 and 2008.

New menu bar structure

Automatically generate annotation content.

Drag up and down to resize media window w.r.t. timeline viewer.

Select a single tier as the basis for the annotation density viewer: very useful for richly annotated documents.

Display number of annotations per tier

Set colour of tier labels to visually group independent tiers

Export tokens from annotations on tiers in multiple files

Perform complex searches across multiple EAF files

Select which of the linked media files are displayed

Elaborate quantitative information on tiers and annotations in a document.
