Mesocosm project Nijmegen

- Greenhouse Radboud University
- Summer 2020: dredging (removal of sediment) simulation
- Also fieldwork opportunities (Wylerbergermeer)
- Lots of opportunities for your own ideas! E.g.:
  - How do plants influence emissions and microbial communities after dredging?
  - Which nutrients are most affected by dredging?
  - What is the effect of dredging on denitrification and methane oxidation rates of lake sediments?
  - How are phytoplankton affected by dredging of the sediment?
