

## Manual: Linking an internal 5-digit number to a Vodafone 06 number.

There are several options for linking your internal 5-digit number to your Vodafone 06 number.

- \*21
- Speed call (request this from your telephone contact person)
- VWO number (request this from your telephone contact person)

### \*21

Your number can be forwarded on a fixed phone by entering 21 -006xxxxxxx. How this work is explained in the manual: "Forwarding your phone number yourself".

Advantages of this method:

- The RU's landline number, for example 024-36xxxxx, is immediately linked to the 06 number and can be reached via 024-36xxxxx.
- It is possible to set the forwarding so that the landline telephone rings first, and that after ringing 3 times the call is forwarded to the mobile number 06-xxxxxxx. Your telephone coordinator can request this for you from Telephone Services.
- The telephone guide can still display the old number.

Drawbacks of this method:

- Because the landline telephone must remain in place, you pay for both the fixed phone and the mobile device/subscription. It is more expensive than the methods below.
- From the mobile number you have to dial the full telephone number, instead of the shortened 5-digit number, to reach a colleague with a landline. E.g. 024-36xxxxx.

-----

### Speed call

The easiest method to forward your 5-digit number to your mobile number is a "speed call". You can request this via your telephone coordinator from Telephone Services. Your old landline telephone will be removed and replaced with a speed call.

Advantages of this method:

- The fixed RU number, for example 024-36xxxxx, is immediately linked to the 06 number and can be reached via 024-36xxxxx.
- Using the old number and forwarding is free. You only have to pay for the costs of your mobile phone and your subscription.
- The telephone guide can still display the old number.

Drawbacks of this method:

- From the mobile number you have to dial the full telephone number, instead of the shortened 5-digit number, to reach a colleague with a landline. E.g. 024-36xxxx.
- A drawback is that permanent call forwarding can not be switched off, e.g. during holidays.

## VWO number

A Vodafone Wireless Office number can be called internally with your shortened 5-digit number or your 06-number. You can call the 5-digit RU-numbers of landline telephones or other VWO numbers.

VWO numbers use internal number sequences.

024-81+ 87500-87999/024-30+ 96000-96500.

Advantages of this method:

- You only have to pay for the costs of your mobile phone and your Vodafone subscription.
- You can call internally and receive calls from 5-digit numbers.

Drawbacks of this method:

- A drawback is that permanent call forwarding can not be switched off, e.g. during holidays.
- To receive external calls, you must enter your full 06 number. Your shortened VWO number will not work.

### TIP:

Always give your full 06 number to other people. This ensures that people can also call you from external numbers.
