Cross-Sectional Follow Up (2020 - 2021)

MIND-Set Main (2016 - 2020)

Clinical Questionnaires
- Clinical Diagnosis (SCID, NIDA, DIVA, MATE)
- Symptom Severity (IDS, ASI, CAARS, AQ-50, TAS-20)
- Family history (FIGS)
- Functional limitations (WHODAS-36)
- Quality of Life (OQ-45)
- Food intake (TACTICS)
- Personality (PID-5-BF)
- Executive Functioning (BRIEF-A)
- Somatic health (SF-20, CBS)
- Relation self-problems

Biometric
- Stool sample (microbiome)
- Blood sample (e.g., DNA, inflammation)
- Saliva & hair (cortisol levels)
- Biomedical measures (e.g., pulse, BMI)

Neuroimaging
- Structural (T1, DTI)
- Hariri Task
- Stress induction/Neutral
- Resting state (3x)

Neuropsychological
- Executive functions (TAP & CANTAB)
- Reversal learning (PRL)
- Attention Bias (Eyetracking)
- Emotion Recognition (Eyetracking)
- Memory Bias Task (SRET)
- Mood
- Premorbid IQ (NLV)

COVID-19 Follow-up
- Coping and Resilience (Dynacore)
- Symptom Severity (IDS, ASI)
- Repetitive Negative Thinking (PTQ)
- Functional Limitations (WHODAS)
- Substance use (Fagerstrom, AUDIT)
- Processing Shock (SLV)
- Memory Bias Task (SRET)
- Cortisol (hair sample)
